CHANGE LIST 3

INTRODUCTION

This document contains the release notes for the LexisNexis InstantID Question and Answer (IIDQA) Nodes marketplace package available upon the PingOne Advanced Identity Cloud (Ping AIC) formerly known as ForgeRock Identity Cloud, as well as Ping Access Management (PingAM) formerly known as ForgeRock Access Management.

QUALIFICATION STATEMENT

Ping AIC / ForgeRock Identity Cloud

LexisNexis IIDQA Nodes are tested on Ping AIC the latest release of software. The nodes are part of the Ping Identity release process and validated on a regular basis.

PingAM / ForgeRock Access Management (On Premise)

This section documents testing performed with LexisNexis IIDQA Nodes. This table captures tested configurations. The intent is to demonstrate backwards compatibility. Newer versions of infrastructure compliant with Ping Identity published system requirements should be supported.

Component	AM 7.3	AM 7.4	AM 8.0	AM 8.1
Java (OpenJDK)	11	11	17	17
Web Container (Tomcat)	9	9	10	10
LexisNexis InstantID Q&A Nodes Jar	1.3.1-v7.x	1.3.1-v7.x	1.3.1-v8.x	1.3.1-v8.x

Note: The LexisNexis IIDQA Nodes are only compatible with PingAM / ForgeRock Access Management version 7.3 and later.

Note: Due to differences in compatibility between PingAM v7.x and PingAM v8.x, there are two different distribution media jar files for the LexisNexis IIDQA nodes.

KNOWN ISSUES

This following is a complete list of currently known issues:

- Feature request has been submitted for questions with answer selection to be visualized via radio buttons, in addition to current dropdown list. PingAM and PingAIC do not support the buttons at this time.

CHANGE LIST

LexisNexis InstantID Question and Answer (IIDQA) Nodes 1.3.1 – October 2026

- Added optional feature that will include a quiz header selection row before the list of quiz answers. This feature is useful for dropdown list displays, however for radio button display the header may not be desired. The feature also includes ability to define the text for the quiz header row.
- Fixed issue with ability to handle null Help Text associated to a quiz question. When LexisNexis InstantID Question and Answer service does not provide help text for a question, that value is not contained in the text output callbacks for building the display.

LexisNexis InstantID Question and Answer (IIDQA) Nodes 1.3.0 – August 2026

- Added feature where dropdown list for quiz answers has a selection row before any answers, thus not signaling any selection to the user.
- Updated API Request/Response logging level to INFO (previously was DEBUG). This allows the log statements to be in PingAIC monitoring logs without having to activate debug mode. Additionally, this provides a integration opportunity for customers to utilize the PingAIC Cloud App for Splunk to capture LexisNexis Risk Solution DDP data into the Splunk environment.
- Added feature where a new state variable iidqa.failure_reason will contain text related to the ERROR outcome from the IIDQA Nodes.
- Added configuration toggle to LexisNexis IIDQA Decision node. When the toggle Store API transaction is enabled, the IIDQA decision API response will be in a state variable named iidqa.api_response. If not enabled, no final API response data will be available in shared state.

LexisNexis InstantID Question and Answer (IIDQA) Nodes 1.2.1 – July 2026

- Fixed issue with PingAM v8.1 backwards compatibility. The User Directory option to fetch additional attributes was failing with Ping v8.1.

LexisNexis InstantID Question and Answer (IIDQA) Nodes 1.2.0 – February 2026

- Fixed issue with transient state versus shared state processing of objects within Authentication Trees and Journeys for PingAM v8.x. Due to the changes in implementation of PingAM NodeState, there are now two versions of the nodes, mainly lexisnexis-iidqa-1.2.0-v7.x.jar and lexisnexis-iidqa-1.2.0-v8.x.jar.

LexisNexis InstantID Question and Answer (IIDQA) Nodes 1.1.1 – December 2025

- Implemented feature to support quiz retest. When the original quiz does not completely fail, there is an indication from the IIDQA decision node to challenge for additional quiz questions. The challenge outcome can be directed to IIDQA Quiz Collector.
- Fixed a bug when using Shared State option to fetch optional attributes for the Get Quiz node. This is specific to how PingAIC attribute collector nodes inject information into shared state, mainly how the attribute collector injects information into `objectAttributes`.
- Updated Apache Commons Text library version to address a potential security vulnerability.

LexisNexis InstantID Question and Answer (IIDQA) Nodes 1.1.0 – August 2025

- Updated configuration with Base URL parameter replacing specific URIs, along with HTTP URL validation.
- Updated for most recent PingAM releases.

LexisNexis InstantID Question and Answer (IIDQA) Nodes 1.0.0 – November 2023

- Initial Release
